

# **ABSTRACT**

An ointment patch includes a support, an ointment, and optionally, a separator. In this ointment patch, the ointment is coated on one surface of the support in an amount of 0.1mg to 200mg per 1cm<sup>2</sup> of the support, and the support has a thickness of 1µm to 2000µm and 50% modulus of 5g/cm to 600g/cm.
